**BALESTIER HILL SECONDARY SCHOOL**  
**END OF YEAR EXAMINATION (2014)**  
**SECONDARY TWO EXPRESS**  
**SCIENCE (BIOLOGY AND CHEMISTRY)**

**Wednesday, 8 October 2014**

**1 hour**

Candidates answer on the Question Paper.  
Additional materials: Multiple Choice Answer Sheet

**READ THESE INSTRUCTIONS FIRST**

Write your name, index number and class in the spaces provided at the top of this page.  
Write in dark blue or black pen in the spaces provided on the Question Paper.  
You may use a pencil for any diagrams, graphs or rough working.  
You may use a calculator.  
Do not use staples, paper clips, glue or correction fluid.

**Section A**

There are **ten** questions in this section. Answer **all** questions.  
For each question there are four possible answers **A**, **B**, **C** and **D**. Choose the one you consider correct and record your choice in the optical answer sheet provided.  
Each correct answer will score one mark. A mark will not be deducted for a wrong answer.

**Section B**

Answer **all** questions in the spaces provided.  
The number of marks is given in brackets [ ] at the end of each question or part-question.

**Section C**

Answer **any two** questions in the spaces provided.  
The number of marks is given in brackets [ ] at the end of each question or part-question.

A copy of the Periodic Table could be found in Page 13.

| <b>Section B</b>   | <b>/20</b> |
| <b>Section C</b>   | <b>/20</b> |
| <b>TOTAL</b>       | <b>/50</b> |

Setter: Mdm Stella Soh  
Vetter: Mr Justin Lee

**This document consists of 13 printed pages.**

### Section A

Answer **all** the questions in this section.  
Shade your answers on the OMR sheet provided.

- 1 This substance is stored in seeds. It is broken down by enzyme amylase during seed germination. What could this substance be?
  - A Fats
  - B Proteins
  - C Starch
  - D Sucrose
  
- 2 Why is digestion important in animals?
  - A It allows energy from food to get into their blood.
  - B Large food molecules have to be made small enough for absorption into the bloodstream.
  - C Large pieces of food need to be broken down into smaller pieces.
  - D Waste materials have to be eliminated from food.
  
- 3 The experiment below shows what happen to three different concentrations of starch solution after a few hours.

Which row lists the starch solutions in increasing concentrations?

|   | Lowest |  | Highest |
|---|--------|-------------------------------------------------------------------------------------|---------|
| A | P      | Q                                                                                   | R       |
| B | P      | R                                                                                   | Q       |
| C | R      | P                                                                                   | Q       |
| D | Q      | P                                                                                   | R       |

- 4 Emma put a balsam plant in a beaker of black ink as shown below.

After 3 days, she cut open a section of the stem and observed it. Which diagram would she expect to observe?

- 5 Which pathogens cause AIDS, gonorrhoea and syphilis?

|          | <b>AIDS</b> | <b>Gonorrhoea</b> | <b>Syphilis</b> |
|----------|-------------|-------------------|-----------------|
| <b>A</b> | Bacterium   | Bacterium         | Virus           |
| <b>B</b> | Bacterium   | Virus             | Bacterium       |
| <b>C</b> | Virus       | Bacterium         | Bacterium       |
| <b>D</b> | Virus       | Virus             | Bacterium       |

- 6 A woman has a 28-day menstrual cycle. Her period starts on the 17<sup>th</sup> July. On which day is she likely to start ovulation?
- A** 24<sup>th</sup> July  
**B** 30<sup>th</sup> July  
**C** 7<sup>th</sup> August  
**D** 14<sup>th</sup> August

- 7 Which of the following shows the correct gases given off for the reactions of acids with metals and acids with carbonates?

|          | Acids and metals | Acids and carbonates |
|----------|------------------|----------------------|
| <b>A</b> | Carbon dioxide   | Hydrogen             |
| <b>B</b> | Carbon dioxide   | Water                |
| <b>C</b> | Hydrogen         | Carbon dioxide       |
| <b>D</b> | Hydrogen         | Water                |

- 8 Which of the following involves only physical changes?

- I Drying cement on a brick wall
- II Drying clothes on a clothing line
- III Switching on an electric cooking stove

- A** I and II only
- B** I and III only
- C** II and III only
- D** I, II and III

- 9 Which statement is true about a food chain?

- A** A food chain must always start with a producer.
- B** Food chains usually have five links.
- C** The number of consumers always increases along a food chain.
- D** The size of the consumers decreases along a food chain.

- 10 Which processes release carbon dioxide to the atmosphere?

- I Combustion
- II Decomposition
- III Photosynthesis
- IV Respiration

- A** III only
- B** I, II and III only
- C** I, II and IV only
- D** I, II, III and IV

## Section B

Answer **all** questions in the spaces provided.

- 1 Five discs of fresh potato (**A – E**), each weighing 10 grams were immersed in sugar solutions of different concentration for two hours, and then dried and reweighed. The change in the mass of each potato disc was recorded in a bar chart as shown in diagram below.

- (a) Name the process that caused the change in mass of the potato discs.

[1]

- (b) Arrange the potato discs (**A – E**) in ascending order of the concentration of the sugar solution that each was immersed in.

| Sugar solution        | Potato discs |
|-----------------------|--------------|
| Lowest concentration  |              |
|                       |              |
|                       |              |
|                       |              |
| Highest concentration |              |

[1]

- (c) Describe and explain what caused the changes in potato disc **C**.

[3]

[Total: 5]

- 2 The table below shows the statistics of HIV infected Singaporean by age from year 1985 to year 2007.

**HIV Infected Singaporeans by Age (1985 – Jun 2007)**

| <b>Age Group</b>      | <b>1985 – 2000</b> | <b>2001</b> | <b>2002</b> | <b>2003</b> | <b>2004</b> | <b>2005</b> | <b>2006</b> | <b>2007 Jan-Jun</b> |
|-----------------------|--------------------|-------------|-------------|-------------|-------------|-------------|-------------|---------------------|
| <b>0-9</b>            | 13                 | 2           | 2           | 1           | 3           | 3           | 3           | 0                   |
| <b>10-19</b>          | 11                 | 1           | 1           | 1           | 4           | 4           | 2           | 2                   |
| <b>20-29</b>          | 304                | 27          | 32          | 29          | 47          | 44          | 57          | 19                  |
| <b>30-39</b>          | 543                | 67          | 56          | 83          | 89          | 95          | 99          | 41                  |
| <b>40-49</b>          | 294                | 68          | 73          | 74          | 89          | 84          | 97          | 47                  |
| <b>50-59</b>          | 108                | 38          | 45          | 32          | 44          | 56          | 66          | 40                  |
| <b>60 &amp; above</b> | 89                 | 34          | 25          | 22          | 35          | 31          | 33          | 15                  |

- (a) What does HIV stand for?

[1]

- (b) Name the sexually transmitted disease that is caused by HIV.

[1]

- (c) The table above shows that Singaporeans in the age group of 0-9 can also be infected by HIV despite not being sexually active. Suggest how they maybe infected by HIV.

[1]

- (d) Suggest **two** ways to reduce HIV infection among Singaporeans.

3 The diagram shows how some substances undergo a series of changes.

(a) Identify the processes that have taken place.

|       | Process | Name of process |
|-------|---------|-----------------|
| (i)   | W       |                 |
| (ii)  | Y       |                 |
| (iii) | Z       |                 |

[3]

(b) (i) Write a word equation to represent the reaction that has taken place in process Y.

[1]

(ii) Suggest **one** reason why process Y is considered as a chemical change.

[1]

[Total: 5]

- 4 The diagram below shows what happens to energy as it passes through an ox.

- (a) State the source of the energy in the food eaten by the ox.

[1]

- (b) Name the process that uses up the remaining 35% of the energy in the food available to the ox.

[1]

- (c) What kind of feeding relationship is formed by the ticks with the ox? Explain your answer.

[2]

- (d) The oxpecker found on the back of the ox feeds on both the ticks as well as the blood from the ox's wounds. In the space below, draw a food web to show the feeding relationships of the organisms.

- ## 2.

- [illegible]

**[Turn Over]**

- 2 (a) The diagram below shows a few sperms surrounding an egg. One of the sperms has successfully fertilized the egg.

- (i) Where in the female reproductive system does this process take place?

[1]

- (ii) Describe the events after sexual intercourse that will lead to fertilization of an egg.

[2]

- (iii) Upon fertilisation, the fertilised egg will move to the uterus. How does the fertilised egg move to the uterus?

[2]

(b) The diagram below shows the female reproductive system.

(i) Name the parts labelled **P**, **Q** and **R**.

**P:**

**Q:**

**R:**

[1]

(ii) Ligation is a permanent method of contraception. Mark with the letter "**X**" on the diagram above the site where ligation would be carried out.

[1]

(iii) How does ligation prevent pregnancy in a female?

[1]

(iv) Intra-uterine device is another type of contraception method that a female can use. Mark with letter "**Y**" on the diagram where an intra-uterine device can be placed.

[1]

(v) How does the Intra-uterine device help prevent pregnancy in a female?

[1]

[Total: 10]

- 3 (a) The followings are chemical changes that can be brought about by interactions with heat, light and electric current or other matter. Write them in the correct group to show what causes these changes.

- Combination of iron and sulfur to form iron sulfide
- Production of carbon dioxide from coal
- Splitting of water into oxygen and hydrogen
- Formation of glucose from carbon dioxide and water
- Formation of salt and water from a dilute acid and an alkali
- Copper-plating using copper sulphate solution

|                                   |  |
|-----------------------------------|--|
| Interaction with heat             |  |
| Interaction with light            |  |
| Interaction with electric current |  |
| Interaction with other matter     |  |

[6]

- (b) A flask contains the juice of several oranges. Would you expect the pH of the orange juice to be between 1 and 6 or between 8 and 14?

[1]

- (c) Some pieces of magnesium were added to some of the orange juice. Effervescence of a colourless and odourless gas was seen.

(i) Name the gas produced.

[1]

(ii) How would you test the presence of the gas you named in (i)?

[2]

[Total: 10]

End of Paper

## The Periodic Table of the Elements

<

The volume of one mole of any gas is 24 dm<sup>3</sup> at room temperature and pressure (r.t.p.).

**BALESTIER HILL SECONDARY SCHOOL  
END OF YEAR EXAMINATION 2014  
SECONDARY TWO EXPRESS  
SCIENCE (PHYSICS)**

**Wednesday, 8 October 2014**

**1 hour**

Candidates answer on the Question Paper.  
Additional materials: Multiple Choice Answer Sheet

**READ THESE INSTRUCTIONS FIRST**

Write your name, index number and class on all the work you hand in.  
Write in dark blue or black pen in the spaces provided on the Question Paper.  
You may use a pencil for any diagrams, graphs or rough working.  
Do not use staples, paper clips, highlighters, glue or correction fluid.

**Section A**

There are **ten** questions in this section. Answer **all** questions.  
For each question, there are four possible answers **A, B, C** or **D**. Choose the **one** you consider correct and record your choice in soft pencil on the separate answer sheet.  
Each correct answer will score one mark. A mark will not be deducted for a wrong answer.

**Section B**

Answer **all** questions in the spaces provided.

**Section C**

Answer any **two** questions in the spaces provided.

At the end of the examination, answers to Section A must be handed in separately.  
For Sections B and C, the number of marks is given in brackets [ ] at the end of each question or part-question.  
The use of an approved scientific calculator is expected, where appropriate.

| For Examiner's Use |            |
|--------------------|------------|
| <b>Section A</b>   | <b>/10</b> |
| <b>Section B</b>   | <b>/20</b> |
| <b>Section C</b>   | <b>/20</b> |
| <b>TOTAL</b>       | <b>/50</b> |

Setter: Mr Kenny Sng  
Vetter: Mr Justin Lee

**This document consists of 16 printed pages.**

### Section A [10 marks]

Answer **all** questions on the **Multiple Choice Answer Sheet** provided.

- A1** In the circuit shown below, resistors of varying resistances are connected. At which point is the current the **smallest**?

- A2** In the circuits below, all the resistors are identical. Which of the circuits have the same total resistance?

I

II

III

IV

- |          |                   |          |               |
|----------|-------------------|----------|---------------|
| <b>A</b> | I and II          | <b>B</b> | I, II and III |
| <b>C</b> | I, II, III and IV | <b>D</b> | I and III     |

**A3** Friction can be reduced by \_\_\_\_\_.

- I** making the surface of contact smoother
- II** using ball bearings
- III** using lubricants
- IV** using rollers and wheels

**A** I and II only

**B** I, II and IV only

**C** I, III and IV only

**D** I, II, III and IV

**A4** Two cubic boxes are resting on the floor. Box B has sides which are twice as long as those of Box A.

Which statement is true?

**A** No conclusion can be made based on the information given.

**B** The pressure exerted by A on the floor is equal to the pressure exerted by B on the floor.

**C** The pressure exerted by A on the floor is 2 times the pressure exerted by B on the floor

**D** The pressure exerted by A on the floor is 4 times the pressure exerted by B on the floor.

**A5** Jeremy threw a basketball upwards. Which of the following statements correctly describes what happens to the kinetic energy and gravitational potential energy of the ball just **before** it reaches the highest point?

**A** It gains both kinetic and gravitational potential energy.

**B** It gains gravitational potential energy but loses kinetic energy.

**C** It gains kinetic energy but loses gravitational potential energy.

**D** It loses both kinetic and gravitational potential energy.

- A6** Forces of 3 N and 4 N are used to move objects **P**, **Q**, **R** and **S** over the distances shown in the diagrams below.

Which statement correctly describes the work done by the forces?

- A** The most work is done to move **Q**.
  - B** The most work is done to move **S**.
  - C** The same amount of work is done to move **P** and **Q**.
  - D** The same amount of work is done to move **R** and **S**.
- A7** As sound travels through the air, it eventually fades away. The reason for this is \_\_\_\_\_.

- A** sound does not need a medium to travel
- B** sound travels in a straight line
- C** sound loses energy as it travels
- D** sound travels slower than light

- A8** If the string of a guitar vibrates 225 times in 3 minutes, what is the frequency of the sound produced?

- |                  |                  |
|------------------|------------------|
| <b>A</b> 0.75 Hz | <b>B</b> 1.25 Hz |
| <b>C</b> 12.5 Hz | <b>D</b> 75 Hz   |

**A9** Anthony finds it hard to unscrew the cap of a bottle of jam. What should he do?

- A** Cool both the cap and the bottle.
- B** Cool the bottle.
- C** Heat both the cap and the bottle.
- D** Heat the bottle.

**A10** For the same decrease in temperature, \_\_\_\_\_.

- A** liquids contract less than solids but more than gases
- B** liquids contract more than solids but less than gases
- C** liquids expand less than solids but more than gases
- D** liquids expand more than solids but less than gases

----- End of Section A -----

### Section B [20 marks]

Answer **all** questions in the spaces provided.

- B1** An experiment was carried out to find out how the nature of the surface affects heat lost by radiation. The set up of the experiment is shown in the figure below.

- (a) Define *radiation*.

\_\_\_\_\_  
 \_\_\_\_\_ [1]

- (b) State **two** mistakes made in the setup above that made the experiment unfair.

1. \_\_\_\_\_  
 2. \_\_\_\_\_ [2]

- (c) After making the necessary corrections to the experiment, the water is left to cool. State and explain in which can will the water cool down faster.

\_\_\_\_\_  
 \_\_\_\_\_ [2]

- B2** At the recent Youth Olympic Games, a javelin thrower used 250 J of energy to throw his javelin from a stationary position. The path taken by the javelin is shown in the figure below.

- (a) State the point (**Q**, **R** or **S**) in the above figure where the javelin has

(i) the highest gravitational potential energy,

\_\_\_\_\_ [1]

(ii) the highest kinetic energy.

\_\_\_\_\_ [1]

- (b) State and explain whether the kinetic energy at point **S** is equal to 250 J.

\_\_\_\_\_  
 \_\_\_\_\_ [2]

- B3** A hammer strikes one end of a 600 m long metal pipe. A sensitive sound detector at the other end detects two sounds at an interval of 1.9 s between them.

- (a) Explain why two sounds are detected by the sound detector.

\_\_\_\_\_  
 \_\_\_\_\_ [2]

- (b) The speed of sound in air is 300 m/s. Calculate
- (i) the time taken for the sound to reach the detector by air,

Time taken = \_\_\_\_\_ s [2]

- (ii) the speed of sound in the metal pipe.

Speed of sound in metal pipe = \_\_\_\_\_ m/s [2]

- B4** The diagram below shows a bimetallic strip thermostat used to turn on and off an oven. The contacts are now open as the interior of the oven is now at 350 °C.

- (a) State which metal, A or B, contracts more when cooled.

[1]

- (b) If a higher temperature in the oven is desired, state and explain briefly whether contact Z should be moved nearer or further away from the bimetallic strip.

\_\_\_\_\_  
\_\_\_\_\_ [2]

- (c) Suggest **two** possible modifications to this thermostat to enable it to work in an air conditioner.

1. \_\_\_\_\_  
2. \_\_\_\_\_ [2]

----- End of Section B -----

**Section C [20 marks]**

Answer any **two** questions in the spaces provided.

- C1 (a)** **Figure 1** shows an experiment to measure the friction between the object and the surface of a floor.

**Figure 1**

- (i) State the name of Instrument X. [1]
- \_\_\_\_\_
- (ii) On the diagram, indicate the direction of the frictional force acting on the object. [1]
- (b) **Figure 2** below shows a stool. Each leg of the stool has a square base of side 5 cm.

**Figure 2**

- (i) Define *pressure*. [1]
- \_\_\_\_\_
- \_\_\_\_\_

- (ii) Find the pressure exerted on the floor if the weight of the stool is 6 N.

Pressure = \_\_\_\_\_ N/cm<sup>2</sup> [2]

- (iii) Find the pressure exerted on the floor when a lady of weight 50 N sat on the stool.

Pressure = \_\_\_\_\_ N/cm<sup>2</sup> [2]

- (iv) The stool is now replaced by another stool of the same weight which has only three legs, each of which has a square base of side 5 cm. State and explain how this would affect your answer in (iii) if the lady now sits on this stool.

---

---

---

[3]

- C2 (a)** **Figure 3** below shows an experimental setup using a glass flask containing air. The tube of the flask is immersed in water.

**Figure 3**

- (i)** When the flask is heated, bubbles are observed in the water. Explain this observation.

---

---

[2]

- (ii)** The flask is then cooled. Predict and explain what would be observed.

---

---

---

---

[3]

- (b)** Explain how a sea breeze is formed by convection.

---

---

---

---

[3]

- (c) Paper steamboat is a very popular Japanese cuisine where the food is placed in paper and cooked over the flame. Explain, using knowledge of the process of thermal energy transfer, why the paper will **not** catch fire easily.

Figure 4

---

---

---

[2]

- C3 (a)** In the experiment shown in **Figure 5**, one hand is pressed onto an end of a flexible plastic ruler against a table top. The other hand pushes the free end of the ruler and releases. A sound is heard.

**Figure 5**

- (i) State what produces the sound that is heard.

[1]

- (ii) As the plastic ruler moves up and down, the ruler is moved in the direction of the arrow shown in **Figure 5** so that less of it extends over the table's edge. State and explain what happens to the pitch of the sound produced.

[3]

- (iii) The experiment is repeated again by striking the ruler with a larger force. State and explain the difference in the sound obtained.

[2]

- (b) **Figure 6** below shows a man firing a gun. He stands 150 m away from a cliff and 300 m away from a second man. The speed of sound is approximately 300 m/s.

**Figure 6**

- (i) Calculate the time taken for the second man to hear the gun shot after it was fired.

Time taken = \_\_\_\_\_ s [1]

- (ii) Calculate the time taken for the second man to hear the echo from the cliff after the firing.

Time taken = \_\_\_\_\_ s [2]

(iii) Describe one useful application of echo.
